

Pressure-Indicating Film

variations are immediately visible

Pressurex Zero pressure-indicating sensor film characterizes tactile contact surface pressure down to 7.2 psi. The easy-to-use flexible film is placed between

contacting or mating surfaces to instantly and accurately measure and map pressure magnitude and distribution. Variations in contact surface pressure are immediately visible by the impression made on the film. It changes color directly proportional to the actual pressure applied. The thin film plastic sheet comes in eight pressure ranges, with the highest measuring impact up to 43,200 psi. It can conform to curved spaces. Free samples are available.
